

“There is no contest that I would choose the Noctura 400 treatment over the laser treatment”

“The mask is easy to use and understand”

“I sleep better with the mask on, I have not had a sleepless night whilst wearing the mask”

“I continue to wear the mask when going to bed and would encourage anyone with diabetes and suffering from retinopathy to do the same.”

Sleep Mask for Diabetic Retinopathy

The Noctura 400 CE certified Sleep Mask is a safe, ground-breaking, non-invasive treatment for Diabetic Retinopathy, available following extensive medical testing.

How the Treatment Works

The treatment works by using a specially tuned light to prevent the dark adaptation of the cells in the eye at night. This reduces the oxidative stress on the retina which is one of the underlying causes of Diabetic Retinopathy. The mask emits a low level, gentle light that glows through the closed eyelids and has been designed to prevent disturbances to sleep patterns.

How the Mask is Used

The Noctura 400 Sleep Mask is designed to be worn during the hours of sleep. The mask emits a light which shines through closed eyelids. The wavelength of the light has been specifically chosen so that your eyes adjust to ignore the light allowing you to sleep with no interruption to the sleep cycle.

The Noctura 400 Sleep Mask has inbuilt intelligence which manages and monitors the treatment dosage and duration.

The data captured gives clinicians and optometrists precise information. When used in conjunction with existing eye examinations, full monitoring of the disease and the progress of the treatment can be observed.

Testimonial

Lorraine Helliwell has had type 1 diabetes for over 50 years and has received laser treatment for Diabetic Retinopathy in both eyes. Lorraine started to use Noctura 400 after an eye examination indicated a renewed presence of macular retinopathy and was referred to an NHS consultant for further laser treatment. Lorraine wore the mask for a period of 6 weeks before the consultation visit and was subsequently discharged with no evidence of macular disease.

"I would definitely recommend other people with diabetes to use the mask"
